

CHILDREN EMPLOYED OVER 12 YEAR PERIOD

For the purpose of establishing the trend of child employment in North Carolina, we have gone back over the records of a twelve year period to secure this information.

The results of this study are presented in the following tables and charts

Children Certified For Employment In All Industries
Of North Carolina Over Twelve Year Period

Table 5 - Page 10

This table presents the actual number of certificates issued each year, tabulated according to color, sexes and ages of the children. The percentage of changes in the number entering employment are also shown, comparing 1932 with 1933, and 1933 with 1932.

Indexes revealing the trend of employment of boys and girls 14 and 15 years of age are shown graphically on page 11. It is interesting to note that the general decline is more outstanding for the children 15 years of age, than that of the 14 year old children.

Children Certified For Employment In the Textile Industry
Of North Carolina Over Twelve Year Period

Table 6 - Page 12.

This table presents tabulations of the number of children employed for textile mill occupations throughout the State over 12 year period. Tabulations are made according to color, sexes and ages. The percentage changes in the numbers of children employed are shown comparing the years 1932 with 1933, and 1933 with 1932.

Indexes showing the trend of textile employment for children are presented on Page 13. While there was a marked decline in this employment up until the year 1932-33, the indexes reveal that the decrease for the 14 year old children was not as outstanding as that of the children 15 years of age.

Children In Industry
